Eric,
I've discovered that Google has broken their own YouTube geo-search API due to a YouTube backend database upgrade a few weeks ago.
Per https://code.google.com/p/gdata-issues/issues/detail?id=4234
It looks like it will be down for at least another month or longer, so I have placed some text in the YouTube part of the Social Media widget telling the user it is not working, and I have changed the default tab when they open the Social Media widget to show on the Flickr Search instead of the YouTube search. The Flickr and Twitter search will still work like they should, and I will still leave the Youtube tab showing at the top, just to demonstrate the possibilities.

The social media widget needs a refactoring for the updated Flickr and Twitter API's, so I will be upgrading that widget for sure again on the National Template V3.3.

I will let you know if I find any other bugs. Everything is now up to date on the 'WestFert30test' Viewer, and just make sure to clear your browser cache of course.
